

EXI 600-800

Upgrade Kit

For 350/400 EXI 600 Top Drives

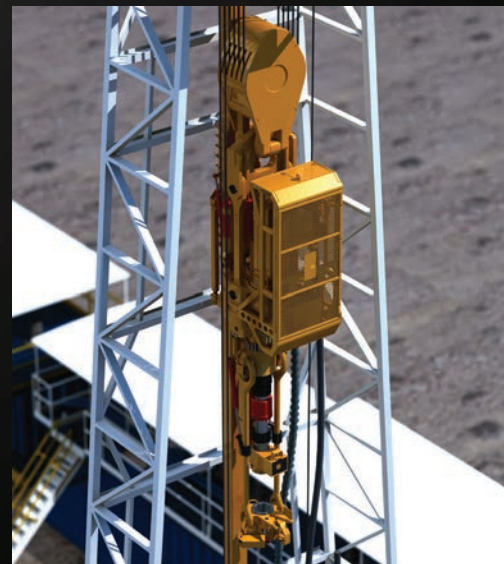

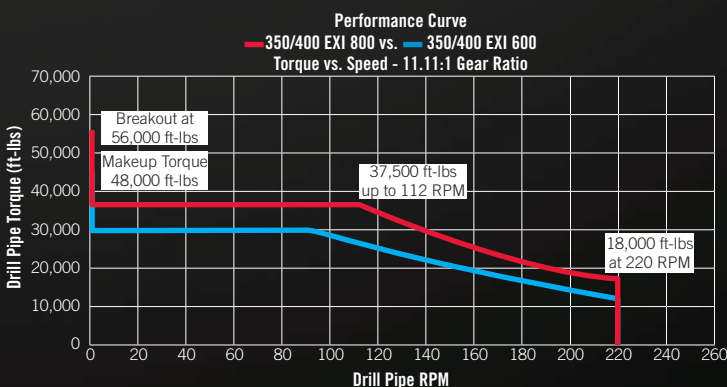

Tesco's new 350/400 EXI 600 to 800 Top Drive Upgrade Kit was designed to build on its predecessor, the 350/400-ton EXI 600 horsepower (hp). It is a cost-effective solution to meet the demands of not only today's, but tomorrow's highly complex and ever-changing drilling applications. Tesco's EXI 800 hp Upgrade Kit allows drilling contractors to meet or even exceed torque curves only previously available in much larger, 500-ton electric top drives while remaining the 350 to 400-ton class and price point. Tesco believes that providing an upgrade option at a fraction of the cost of a new replacement top drive creates significant economic value for their clients.

The EXI 800 hp employs an AC induction motor and drive system that can be operated by a self-contained power module supplied by Tesco, or by connecting directly to the rig's existing Variable Frequency Drive (VFD) lineup if the top drive is already integrated.

The upgrade, including motor, gear and quill modification, improved lubrication and cooling system can usually be performed without any additional time during a Tesco OEM recertification (if required). Therefore, upgrading your EXI 600 hp unit at the time of recertification can substantially reduce the overall investment in the upgrade.

FEATURES & BENEFITS

- Utilizing the existing EXI 600 hp structure enables a cost-effective alternative for greater power density and drilling torque as compared to purchasing a new higher torque replacement top drive
- The EXI 800 hp boasts 30% more power than its predecessor, with a minimal increase in overall height and no other changes to overall dimensions
- Industry standard VFD technology means that it is "integration ready" or "stand-alone ready" on existing drilling rig electrical power systems
- Compatible with software enhancements such as Tesco's Automated Rig Controls™ (ARC™) suite of software and zone management system
