True in our Service Towards Customer Focus

## Offshore Top Drive Recertification

### Customer Focus:

In May of 2015, Pacific Drilling was looking for a facility in Houston that could accommodate and service large offshore equipment. Offshore top drives are typically much larger than those meant for drilling on land. This particular top drive was a Varco HPS 1000 ton top drive, weighing 80,000 pounds (36.28 metric tons) and measuring at a height of 28 feet (8.53 meters).

### True Result:

Tesco's Magnolia facility has both the crane capacity and necessary ceiling height to perform recertifications on top drives such as the HPS 1000. Tesco's facility also houses one of the largest dynamometers in the United States, perfectly suited for recertifying large offshore top drives.

### Proven Performance:

Feedback received from Pacific Drilling was excellent, revealing that they were highly satisfied by the work performed by Tesco. Many OEM models have been tested and repaired by Tesco's diligent Aftermarket team, but this was Tesco's first offshore top drive recertification of this size and marks the beginning of many new opportunities for the future.

*An HPS 1000 top drive is tested in Tesco's dynamometer.*

**Product Line:** NABU Aftermarket Sales & Services

**Location:** Magnolia, Texas

**Rig Name:** Pacific Mistral

**Rig Type:** Drill Ship

**Model Name:** Varco HPS 1000 Top Drive

**Customer Name:** Pacific Drilling

**Customer Status:** Current Customer
